

ASSIGNMENT: Recruitment Website

Description:

Build a Recruitment website that allows a company to view many different Engineers' profiles, view their details , whether or not they've employed. It should be possible to search by name and the data should be persistent after refreshing the page.

Feature list:

- **Search by name**
- **List Engineers alphabetically**
- **Records if an Engineer has been hired (store data in LocalStorage)**
- **Popup when clicked on an Eningeer to show details**

Acceptance criteria:

- **Data sources will be pre-saved in LocalStoreg**
- **Use JS, CSS, HTML**
- **Handle edge cases like validation, errors and placeholders**
- **Include a header and footer (it should look like a landing page!)**
- **Always lists 8 (randomized) Engineers by default at every refresh**
- **Add documentation on how to setup the project for viewing locally**
- **Deploy your website on Heruko**
